

**REMARKS**

In response to the objections set forth on the marked copy of the original sequence listing, a replacement sequence listing has been prepared and is attached hereto in paper copy form as replacement pages 22 and 23 and in computer readable form. The six nucleotide sequences remain unchanged. The only changes made are to the identifiers 213 and 223. Accordingly no matter has been added.

It is respectfully requested that these two replacement pages and the CRF copy of the sequence listing be substituted for those originally filed and that the application be passed along for examination.

Respectfully submitted,

FITCH, EVEN, TABIN & FLANNERY
